

Waitlists

Work in progress!

For the sake of today's discussion, let us assume the following:

- We have an SIS system that supports the proposed changes to our waitlist procedures and processes
- Waitlists function like true waitlists (ie students on waitlists are not automatically rolled on to class rosters, thus inflating the actual size of the class)

Things to ponder over summer:

- When do waitlists stop being active?
- When do add codes become available to instructors?
- How many different waitlists can a student be on simultaneously?
- Should all classes have waitlists?
- Should waitlists have a minimum or maximum size?
